July 28, 2014

Dear Customer,

This letter certifies that Roanoke Cement Company’s Type I/II Portland Cement, manufactured at our facility in Troutville, VA, meets the requirements of the American Society for Testing and Material (ASTM) standard C150 “Standard Specification for Portland Cement” and the American Association of State Highway and Transportation Officials (AASHTO) standard M 85 “Standard Specification for Portland Cement”.

The products we produce at Roanoke Cement can be an integral part of energy design efficiency and environmental awareness. From the use of concrete for parking lots to improve reflectivity and reduce energy usage, to stamped and/or stained concrete interior floors that lower VOC emissions in a building, and many other uses, building materials that incorporate the use of cement contribute to the goal of being energy efficient and environmentally wise. The USGBC’s Leadership in Energy and Environmental Design program, LEED, has advanced a system to rate the process and encourage its ideals.

Roanoke Cement’s Type I/II Portland cement is made from raw materials that include 16% post-industrial recycled content material.

All of Roanoke Cement Company’s products are produced from materials extracted and manufactured within the region. LEED requirement is that the materials be “extracted, harvested or recovered, as well as manufactured within 500 miles of the project site. This radius extends north of New York City, south as far as Jacksonville, FL and west past Louisville, KY.

Sincerely,

Larry Necessary, LEED AP
Manager, Technical Resources
